## Research Interests

I have a broad interest in AI systems that interact with **multimodal data (Language + X, where X includes vision, video, and robotics)**. My long-term research goal is to develop fine-grained, trustworthy multimodal AI agents that are both interpretable and highly efficient. Currently, I am focusing on how AI systems comprehend, learn from, and interact with videos — particularly by advancing methods for temporal video understanding and conducting fine-grained evaluations to enhance the reliability and trustworthiness of video comprehension.
